Is Your Home Is Leaking Energy? It May Be Time for an **Energy Upgrade!**

Do you suffer from:

- High energy bills?
- Rooms that are too hot, too cold or drafty?
- Mold or moisture issues?
- Allergies and asthma that are worse indoors?

Then it may be time for an **Energy Upgrade**. And what better time! Rebates are now available on home performance improvements through **Energy Upgrade California**.

Energy Upgrades can make your home more comfortable, improve your health, and lower your energy bills by 10-40%.

The **Energy Upgrade** program offers two packages for homeowners to choose from:

- The **Basic Package** includes 6 relatively easy, cost-effective measures: air sealing, duct sealing, attic insulation, pipe insulation, low-flow showerheads and a carbon monoxide test. If you choose this package, you can expect energy savings of about 10% and receive a **rebate of \$1,000** from PG&E. The cost of the basic package is typically between \$4,000 and \$6,000.
- The **Advanced Package** begins with a qualified contractor performing an energy assessment and making recommendations for improvements to your home. You can then select the upgrades you would like to make. Rebates of **\$2,000-\$3,500** are available for these improvements, based on the amount of energy saved. Energy savings are estimated to be 20-40% (rebates range from \$2000 for 20% savings to \$3,500 for 40% savings or more). Cost varies.

Visit <http://www.energyupgradecalifornia.com> to get started. Learn about home energy saving options and find a trained and approved contractor to help you discover which **Energy Upgrades** are best for your home!
